

Deadline: please see in your group chat.

Task 1

Task basics

- For this task create a new branch task1 in your repository
- Testing library:
 - For Java - TestNG
 - For C# - NUnit
 - For JS - mocha+chai
- To work with browser/elements of pages you should use Selenium WebDriver library
- Test should be working with Chrome browser

Requirements

1. You should use WebDriverManager in your solution.
2. Locators should meet our requirements.
3. To implement validations of expected results you should use asserts from one of testing libraries mentioned above

Site

<http://uitestingplayground.com/sampleapp>

Test scenario "Random Password"

Step	Expected result
Navigate by URL	Sample App page is displayed
Send in random value to user name field	
Send in 'pwd' to password field	
Click Log In button	Welcome message is displayed
Click Log out button	User logged out message is displayed

Once the task is complete - create a Pull Request for task1 branch

Feedback

Code review for this partial task is not required, but you can contact your mentor to get feedback.
